

# Department of Toxic Substances Control

Maureen F. Gorson, Director 5796 Corporate Avenue Cypress, California 90630

# Department of Toxic Substances Control (DTSC) **Project Status Update** for Former Wyle Laboratories Norco Facility Site **September 29, 2008**

### **Update on the Feasibility Study (FS)**

DTSC plans to issue comments on the FS in early October. The FS provides an analysis of various alternatives for the cleanup of contaminated groundwater both onsite and offsite.

### **Hydraulic Containment System**

The hydraulic containment system (HCS) has been in operations since March 20, 2008. Through June 2008, the HCS has removed approximately 544,400 gallons of groundwater and has recovered approximately 44.91 pounds of volatile organic compounds. The HCS was up 98.8% of the time. Separately, DTSC has instructed Wyle to decommission Areas F and H 2-PHASE Extraction Remediation System (system). The effectiveness of the system has decreased over time, and that continued operation is neither technically nor economically feasible. Additionally, the encouraging results associated with the effectiveness of the in-situ chemical oxidation test, the effectiveness of natural attenuation, and proposed remediation in the Feasibility Study, further eliminates the need for the operation of the system. DTSC had instructed Wyle to move the extraction wells towards the northwest area as part of the HCS to control further migration of contaminated groundwater offsite.

#### **Activities completed last week**

#### Onsite:

- Continued operations of HCS; Conducted routine operations and maintenance (O&M) for HCS;
- Conducted O&M activities for soil vapor extraction system;

Former Wyle Laboratories Norco Facility Site September 29, 2008 Page 2

## **Activities planned for this week**

### Onsite:

- Continue O&M activities for soil vapor extraction system;
  Perform O&M activities for HCS.
